CRC calculation unit RM0090

#### 4 CRC calculation unit

This section applies to the whole STM32F4xx family, unless otherwise specified.

#### 4.1 CRC introduction

The CRC (cyclic redundancy check) calculation unit is used to get a CRC code from a 32-bit data word and a fixed generator polynomial.

Among other applications, CRC-based techniques are used to verify data transmission or storage integrity. In the scope of the EN/IEC 60335-1 standard, they offer a means of verifying the flash memory integrity. The CRC calculation unit helps compute a signature of the software during runtime, to be compared with a reference signature generated at link-time and stored at a given memory location.

#### 4.2 CRC main features

- Uses CRC-32 (Ethernet) polynomial: 0x4C11DB7
   X<sup>32</sup> + X<sup>26</sup> + X<sup>23</sup> + X<sup>22</sup> + X<sup>16</sup> + X<sup>12</sup> + X<sup>11</sup> + X<sup>10</sup> + X<sup>8</sup> + X<sup>7</sup> + X<sup>5</sup> + X<sup>4</sup> + X<sup>2</sup> + X + 1
- Single input/output 32-bit data register
- CRC computation done in 4 AHB clock cycles (HCLK)
- General-purpose 8-bit register (can be used for temporary storage)

The block diagram is shown in Figure 8.

## 4.3 CRC functional description

The CRC calculation unit mainly consists of a single 32-bit data register, which:

• is used as an input register to enter new data in the CRC calculator (when writing into the register)

• holds the result of the previous CRC calculation (when reading the register)

Each write operation into the data register creates a combination of the previous CRC value and the new one (CRC computation is done on the whole 32-bit data word, and not byte per byte).

The write operation is stalled until the end of the CRC computation, thus allowing back-to-back write accesses or consecutive write and read accesses.

The CRC calculator can be reset to 0xFFFF FFFF with the RESET control bit in the CRC\_CR register. This operation does not affect the contents of the CRC\_IDR register.

# 4.4 CRC registers

The CRC calculation unit contains two data registers and a control register. The peripheral The CRC registers have to be accessed by words (32 bits).

#### 4.4.1 Data register (CRC\_DR)

Address offset: 0x00

Reset value: 0xFFFF FFFF

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
	DR [31:16]														
rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
	DR [15:0]														
rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw	rw

Bits 31:0 Data register bits

Used as an input register when writing new data into the CRC calculator. Holds the previous CRC calculation result when it is read.

### 4.4.2 Independent data register (CRC\_IDR)

Address offset: 0x04

Reset value: 0x0000 0000

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
Reserved															
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
	B1										IDR	[7:0]			
	Reserved								rw	rw	rw	rw	rw	rw	rw

RM0090 Rev 21 115/1757

CRC calculation unit RM0090

Bits 31:8 Reserved, must be kept at reset value.

#### Bits 7:0 General-purpose 8-bit data register bits

Can be used as a temporary storage location for one byte.

This register is not affected by CRC resets generated by the RESET bit in the CRC\_CR register.

## 4.4.3 Control register (CRC\_CR)

Address offset: 0x08

Reset value: 0x0000 0000

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
							Rese	erved							
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved												RESET			
												w			

Bits 31:1 Reserved, must be kept at reset value.

#### Bit 0 RESET bit

Resets the CRC calculation unit and sets the data register to 0xFFFF FFFF.

This bit can only be set, it is automatically cleared by hardware.

### 4.4.4 CRC register map

The following table provides the CRC register map and reset values.

Table 22. CRC calculation unit register map and reset values

Offset	Register	31-24	23-16	15-8	7	6	5	4	3	2	1	0	
	CRC_DR		Data register										
0x00	Reset value		0xFFFF FFFF										
	CRC_IDR				Independent data register								
0x04	Reset value	F	Reserved	t	0x00								
	CRC_CR												
0x08	Reset value				F	0
